

'LEAN THINKING' ...

...for the Manufacturing Industry

(2 Day Advanced Level Workshop)

SESSION OUTLINE

DAY 1

- Introduction to Lean, TPM & TOC
- Workplace Simulation – run 1
- Leading & Managing Change
- Opportunity Identification
 - Loss & Waste Categories
 - Loss & Waste Analysis
 - Value Stream Mapping
- Teamwork
- 5S – Workplace Organisation
- Process & Material Flow - 1
- Work Load Balancing
- Set-up Time Reduction

DAY 2

- Workplace Simulation – run 2
- Visual Measures
- Problem Solving
 - PDCA, DMAIC, Fishbone, 5 Why's
- Error Proofing
- Process & Material Flow - 2
- Standard Work
- Workplace Simulation – run 3
- Implementation Plan

TAKEAWAYS

- Your Company's Best Practice Assessment & Implementation Actions

WHAT IS LEAN?

Lean describes a system of Continuous Improvement which focuses on eliminating all forms of waste through the implementation of appropriate tools, techniques and Best Practices.

Specifically, Lean analyses and improves the flow of products, services and information through value added activities, resulting in improved process effectiveness, staff engagement and therefore customer satisfaction.

Implementing Lean tools and techniques will enable your business processes to be flexible and efficient.

The objective is to satisfy customer demand for quality products and services at the right time and at a competitive price.

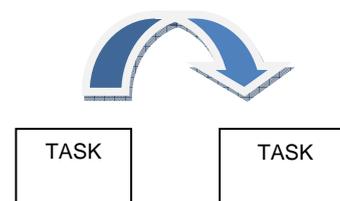

This includes managing total costs and providing an acceptable ROI to stakeholders.

ORIGINS OF LEAN.

Lean tools and techniques have primarily evolved through the manufacturing sector, however in today's competitive market all business sectors are obliged to continuously improve if they are to survive.

No business today is immune to this increasing level of competition and recent evidence confirms that implementing Lean can dramatically improve business performance.

The reason why Lean can improve any type of business becomes clear when we realise that all work is in fact a system made up of tasks / processes and interactions between these tasks / processes.

- We can improve or eliminate the task and / or
- We can improve the flow between the tasks

Lean sets out to achieve continuous improvement through effective Leadership, management and engagement of all stakeholders in the change process.

WHO SHOULD ATTEND?

Leaders and implementers of change from both management and operations will gain significant benefits from attending this workshop.

A team of experts with many years practical experience in a variety of industries will facilitate the learning process.

To maximise learning's the training includes: -

- Presentations,
- Interactive discussions,
- Self Assessments,
- A workplace simulation &
- Many other practical exercises

'LEAN THINKING' ...

...for the Manufacturing Industry

(2 Day Advanced Level Workshop)

What are benefits of Lean?

- Increased throughput
- Reduced operating expenses
- Reduced inventories
- Better morale
- Improved quality
- Reduced errors & rework
- Reduced lead-times & greater supply chain responsiveness
- Improved participation & communication
- Improved fulfillment of your order winning criteria
 - Cost
 - Quality
 - Speed
 - Flexibility
 - Information

Lean Process Losses

- Resource breakdowns
- Resource change-overs
- Resource minor stops
- Resource running slow
- Resources lost time during start up or shut down
- Resource causing errors

Lean Process Wastes

- Overproduction
- Waiting
- Unnecessary handling
- Unnecessary processing
- Unnecessary motion
- Unnecessary work-in-progress
- Rework of errors
- Lost human creativity

WHAT ARE THE LEAN BEST PRACTICES?

Leading & Managing Change

Rather than just hoping you're armed to handle change we make sure of it with concepts and tools from the world's leading change experts. This includes Kotter's eight steps for successful change.

Teamwork

Teamwork centres on the empowerment and involvement of frontline workers on a common set of targets to drive Continuous Improvement.

5S

5S is a system for workplace organisation contributing to becoming a highly organised and efficient operation. The world's best companies suggest that if you cannot excel at 5S you cannot expect to excel at anything in business.

Visual Measures

Learn the importance of Visual Measures in driving changes in behaviour and the benefits of displaying Visual Measures to your workforce.

Problem Solving

Is about making Continuous Improvements in the workplace by focusing on eliminating major losses and wastes through structured, simple problem solving.

Total Productive Maintenance

Total Productive Maintenance addresses systems and activities needed to ensure maximum equipment availability and performance at an optimum cost.

Set-up Time Reduction

Understand the need for and the techniques to help reduce set-up times in terms of your organisation's quest for flexibility, competitiveness and profitability.

Process Flow

Lean organisations deploy Pull Systems to control the flow of products or services from one process to another. Upstream processes will only transfer work when the downstream process requires it. Also learn about the "Theory of Constraints" and how to detect your constraints and increase your throughput potential.

Standard Work

Standard Work is the process of developing the best way currently known to do a task and then ensuring everyone is capable and consistently applies this best method.

Standard Work is the key to controlling and removing process variability.

Value Stream Mapping

VSM clarifies complex systems, allows identification of problem areas, and provides a tool for effective planning and implementation of solutions.

Value Stream Maps are live documents which should be refined and updated as the system changes.

Waste Reduction

Learn how to identify the various different categories of Lean process losses and wastes and how to apply appropriate Best Practices to reduce or eliminate them.

Waste is anything that uses resources but does not add real value as determined by the customer.

'LEAN THINKING' ...

...for the Manufacturing Industry (2 Day Advanced Level Workshop)

How Mature Is Your Company?

The workshop helps you focus on Lean Best Practices that drive your performance and provides a system to track your "Practices Maturity".

Stage 1

No Best Practices used and the company revolves around crisis management and ad hoc responses.

Stage 2

Clearer understanding of company direction, imparted effectively by management.

Stage 3

There is an ownership of Practices at operational, middle management and senior management levels.

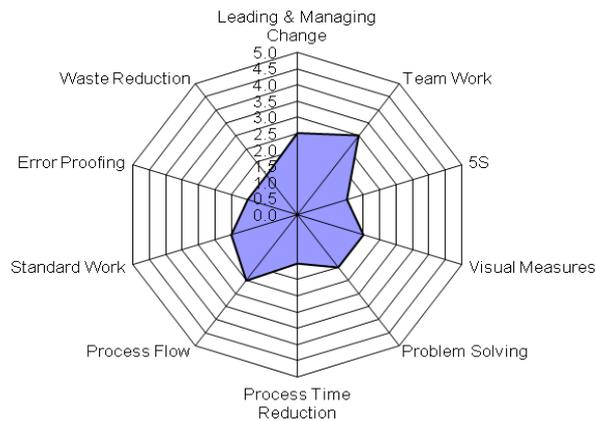

Stage 4

Practices are constantly being honed and refined. Management is consultative and the company is utilising technologies to improve performance throughout the supply chain.

Stage 5

Best Practices are a 'way of life'. Management has adopted a mentoring style within the company and its supply chain business partners

Lean Best Practice Maturity

TESTIMONIALS

"As a Director of a medium sized company and having worked in this business for 25 years, I was astonished by the ability of your Lean Thinking workshop to fundamentally change the way we see many of the business practices within our company. We were able to apply learnings the very next week, which immediately saved us \$10,000, and much more since! I'm keen to send more of our employees to your next workshop so that we can accelerate the gains.

Anthony Gardiner – (former) Director, JDN Monocrane

"Exceeded expectations! Improving the performance of the business over the last 2-days by 1000% in the simulation exercise. There is huge potential integrating these principles and practices into the workplace."

Michael Dean, National Engineering Manager, Bluescope Steel Service Centres

"Even though as a business we were using many of the lean tools, the workshop helped us identify improved ways of applying them to business opportunities."

Andrew Meek – CEO, AW Bell

"The workshop has provided the necessary skills to take away and begin the 'Lean Journey' back at work."

Paul PingNam – Business Unit Manager, Rosebank Engineering

"This course gave us a fantastic insight into the hidden opportunities within our business."

Stephen MacDonald – General Manager, Albins Off Road Gear

"Course was an eye opener. I will be able to use the content in actual manufacturing lines at the plant."

Peter Wright – Site Manager, Frame and Truss, Bunnings

"I suggest all companies that need to compete in the market today send some of their employees to this course."

Malcolm Edwards – A.W. Bell

'LEAN THINKING' ...

(2 Day Advanced Level Workshop)

TESTIMONIALS

Practical

Practical

"The Lean training that I obtained from both the Advance Lean Training course and the mentoring by Dennis has enabled me to continue to develop and grow my own career...supporting RIO in their improvement journey. The business improvement tools he has taught me, implemented at Burn Brite and at Rio Tinto have caused exponential improvements! Massive return on investment for Rio!"

Peter Osmotherly – Business Improvement Lead, Burn Brite. /
Business improvements Lean Advisor, Rio Tinto Iron Ore

Hands-on

Hands-on

"The simulation sessions were outstanding in demonstrating principles."

Jerry Kops – Program Manager – Aerospace Automation, Marand

"This was an excellent course and it really gets you thinking."

Andrew Dugan – General Manager, Hardchrome Engineering

"Excellent practical examples of how to implement lean thinking, Simple and effective delivery. Changed my perceptions."

Kirk Berenger – Lead Engineer, Chemring Australia

Effective

Effective

"The program was effective, tackled all aspects of Lean, gave great insights into how we apply the principles and watch for pitfalls."

Dina Pratt – Group HR Manager – ANCA

"The simulation is an excellent tool. It is very easy to relate back to real workplace situations and real improvement opportunities. Really ties together many tools learnt from previous training."

Andrew Goff – National Projects Coordinator, CMC Coil Steels

Experiential Learning

Experiential Learning

"Excellent simulation tool - really helps to put theory into a practical test case."

Lee Martin, Executive Director, Access & Organisational Improvement, Melbourne Health

"I found this course far more enlightening than I could have imagined. The three days have added significant armory to the Business Improvement Group at Tenix Marine."

Tom Le Grice – Business Improvement Specialist, Tenix Marine (BAE)

Immediate

Tangible

Results

Immediate

Tangible

Results

"Actively involving the people who actually do the work has been a great benefit – resulting in some really good suggestions that have been implemented already. "

Lesley Smith – General Manager, Propharma.
